It will be seen that Newton s method of drawing the Cissoid fulfils this condition, which is also evident geometrically. The word difference may be taken in its algebraical sense. Writing in (A) tan 0 for m, putting c for--r, and still taking a = 0, 6 = 1, we have (y+c) (ysin 0+xcos 0)--Jc (c--k sin 0) 3 + (y + c)2--k2 (assin9--ycose)2 = 0. After some easy reductions, we can divide out y + c+k sin 8, leaving (y+c--k sinfl) x2+y2)--k2 (y--c--k sin0)--2kc (y sin0+x cos 0) = 0 (D), a general equation for circular cubies having a double point, that is to say, the pedal curve of a parabola. Suppose, in fact, that we take a line parallel to the real asymptote for the axis of, the equation of a circular...
