Reviews

A must buy book if you need to adding benefit. It is actually writter in basic phrases and never difficult to understand. I found out this book from my dad and i advised this publication to find out.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 86 pages. Original publisher: Gaithersburg, MD : U. S. Dept. of Commerce, Technology Administration, National Institute of Standards and Technology, 1997. OCLC Number: ocm38207893 Subject: Photometry -- Standards -- United States. Excerpt: . . . 1. 3 NIST photometric units 1. 3. 1 NIST Luminous intensity unit Until 1991, the NIST luminous intensity unit was derived from the NIST spectral irradiance scale 20 , which was based on a gold-point blackbody, and therefore, dependent on the temperature scale. In 1990, the international temperature scale was revised 21 , and the gold point temperature changed from 1337. 58 K to 1337. 33 K. Due to this change, the magnitude of NIST luminous intensity unit increased by 0. 35 . In 1992 at NIST, a new luminous intensity unit (candela) was realized based on the absolute responsivity of detectors (using a 100 Q. E. silicon detectors 2 and subsequently a cryogenic electrical substitution radiometer 3). The old luminous intensity unit was replaced with the new unit in 1992. The new candela is realized and maintained on a group of standard photometers (referred to as the NIST standard photometers) which are calibrated for illuminance responsivity in A lx. These standard photometers also embody the NIST illuminance unit, and allow luminous intensity to be determined from measured illuminance and distance. The realization and maintenance of the photometric units at NIST are shown in Figure 2.
