This increase in shunt-field resistance causes a decrease in the field current and, hence, a decrease in the strength of the magnetic field in which the armature is rotating. This will result in a decrease in the voltage generated in the armature of the electrical unit, which will cause a reduction in the value of the current being delivered. When the current drops below a certain value the contacts will close and the output will increase in value. This cycle of operations will be repeated many times a minute, and the current actually will remain practically constant in value. Third Brush Regulation The output of practically all the electrical units, when operating as a generator, that were put out by the Delco company duriug 1916 and since, are regulated by the third-brush method. The construction of the electrical...

Reviews

The very best publication i possibly read. it was writtern very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- ***Wilhelm Predovic***

A superior quality book along with the font employed was exciting to see. It is one of the most amazing book i have got read through. You wont really feel monotony at anytime of the time (that's what catalogs are for about in the event you ask me).
